

CLAIMS

1 1. A computer-aided method to selectively display a pre-determined set of
2 contents for a specific class of devices, the method comprising the steps of:
3 generating an image of a pre-determined rendition of the set of contents;
4 identifying a section in the contents based on a preference of a user; and
5 re-formatting the identified section to generate a new rendition, depending on
6 a characteristic of the specific class of devices and a preference of the user;
7 such that the new rendition can be displayed on the specific class of devices.

Sub A10
Fut
C1
2 2. A computer-aided method as recited in claim 1 wherein the user is selected
3 from the group of an end-user viewing the new rendition and the provider of the set
4 of contents.

Sub A11
Fut
C1
1 3. A computer-aided apparatus to selectively display a pre-determined set of
2 contents for a specific class of devices, the apparatus comprising:
3 an image generator configured to generate an image of a pre-determined
4 rendition of the set of contents;
5 a section identifier configured to identify a section in the contents based on
6 a preference of a user;
7 a section manipulator configured to re-format the identified section to
8 generate a new rendition, depending on a characteristic of the specific class of
9 devices and a preference of the user;
10 such that the new rendition can be displayed on the specific class of devices.

Sub A11
